

Summary

The project *Example of the whole workflow for Settlement* had two main goals: First identifying a detailed description of all parts of the workflow for settlement calculations in 3D from a user's point of view and second to test some of the suggested solutions by implementing prototypes.

This report focuses on the former: Identifying a detailed description of all parts of the workflow for settlement calculations in 3D.

The workflow was identified as shown in the picture below and the project was divided into sub project accordingly.

Each sub project generated its own report. Together these were used as basis for this report.

This report is a summary that binds together the conclusions of each sub project.
