Vistula Lagoon Management Plan

Strategic program indicating the main directions of development of the region around the Vistula Lagoon thanks to more informed use of the natural capital i.e. the lagoon itself and its ecosystem services.

The guiding idea: to recommend the most promising ways to combine social, human, economic and natural capital in the region.

Analysis and discussions already carried out points at need for following actions:

1) To improve a status of a nature capital of the Vistula Lagoon;
2) To direct public financial intervention towards selected ecosystem services delivered by the Lagoon;
3) To define competencies and responsibilities in the Vistula Lagoon Region development process and to define its mechanisms
4) To create an independent mechanism enabling an evaluation of alternative development scenarios, selection of the most prosperous ones and facilitation of structural changes necessary to implement the selected scenario.

Opinions of stakeholders:

- new knowledge, new interesting approach to management and governance
- taking into account local communities and their concerns
- enormous engagement and involvement of organisers of workshops
